

ONYX DIGITAL VOICE COMMAND

ONYX Digital Voice Command (DVC) is NOTIFIER's premier digital audio evacuation, paging, and firefighter's telephone system.

THE RIGHT INFORMATION TO THE RIGHT PEOPLE AT THE RIGHT TIME

The ability of ONYX Digital Voice Command to simultaneously broadcast multiple, distinct messages throughout your entire facility will ensure that the right people have the right information at the right time during any emergency - fire, security breach, chemical spill, tornado, or flood.

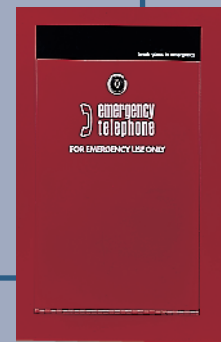

NETWORK VOICE EVACUATION FOR ADDED SURVIVABILITY AND SCALABILITY

With seamless integration into NOTI•FIRE•NET™, NOTIFIER's intelligent fire alarm network, multiple Digital Voice Command Centers can be networked together, adding flexibility and enhancing the survivability of the system. Multiple Digital Voice Command Centers are connected over NOTI•FIRE•NET for larger audio systems requiring hundreds of zones of emergency audio evacuation and paging.

FIVE FIREFIGHTER'S TELEPHONE CHANNELS FOR EMERGENCY COMMUNICATIONS

Digital Voice Command features up to five channels of Firefighter's Telephone operation for communications between emergency responders. From any of five different areas of the building, fire service personnel can simultaneously report crucial information to central command, improving coordination of response operations and increasing safety for firefighters and building occupants.

MULTIPLE PAGING OPTIONS

Preprogrammed paging groups are standard with Digital Voice Command. In an emergency, each group of building occupants receives the information most relevant to them. While evacuation areas receive detailed instructions for exiting the building, inactive areas simultaneously receive notification of a potential emergency.

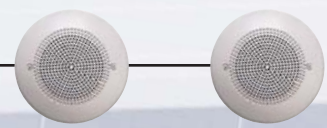

FLEXIBILITY MADE SIMPLE

Digital Voice Command comes with a standard library of message files to choose from when setting up the system, a feature that speeds installation and eases maintenance. In addition to the standard message library, you can conveniently and easily record, edit and distribute your own custom messages or tones. The VeriFire Tools programming utility can be used to compile a series of packaged or custom messages, creating up to 1000 message strings. Digital Voice Command has storage options for 16 or 32 minutes of audio messages.

Digital Audio Riser

ONYX Digital Voice Command

TRUE DIGITAL AUDIO FOR UNPARALLELED CLARITY

From message storage to amplifier output, the voice message remains in a digital format to eliminate distortion and deliver unequalled clarity. The Digital Audio riser connects the Digital Audio Amplifiers (DAA) with wire or fiber. Digital Audio Amplifiers are a powerful 50 Watts in either 25 or 70 Volt versions. Up to 32 Digital Audio Amplifiers can be connected over the Digital Audio riser for any size installation.

SIMULTANEOUSLY BROADCAST MULTIPLE DISTINCT MESSAGES

ONYX Digital Voice Command delivers eight channels of quality audio for live emergency paging and simultaneous broadcasting of multiple, distinct messages throughout your facility or selected areas. Building occupants will receive clear, concise voice instructions pertaining to their location and proximity to the emergency.
